Online stadium ticket reservation system is basically made for providing the customers with adequate service, anywhere and anytime. This project is web-based system.

To establish an efficient way to promote stadium management on the internet.

- (ii) To minimize the number of staff at the ticket box.
- (iii) To increase the profit and obtain statistical information from the booking record.
- (iv) To provide an anytime, anywhere service for the customers to book their match ticket.
- (v) For research purpose (project writing and defuse).
- (vi) The system will enable the organization control crowd in every event.
- (vii) To establish an efficient way of promoting stadium business.

By now, the project is considerably behind the schedule and way over budget. There will be some sort of problems. The software development team will try to solve the ticket selling and refund issues as much as possible. To meet these requirements, a new design is adopted that improves the ticket managing systems. At this point, the development software is complete. The company will later able to sell its systems to other software companies. Epilogue A few years later, the features of this software will may become obsolete and may need to be replaced by a newer model. Management will suggest to upgrade the hardware at the same time. The software professionals will point out that new software will also be needed. They will suggest rewriting the software in a different programming language. However the team members will confident

enough that the new software will be more reliable, faster and of higher quality.
